LeanGUIDO pointer structure for GUIDO example:

{[\text<"blabla">(a d \ritBegin e \tieBegin \dimBegin f {\slurBegin \fermata(f) \tieEnd , ... } \ritEnd a \slurEnd \dimEnd b)],[ ], ... , [ ]}

Dashed endRange connections (between \xxxBegin and \xxxEnd) are not automatically inferred in leanGUIDO 1.0, if needed this connections must be added by the user!
